

csem58.txt

Students will learn how to build an online Website that houses data and allows updating of online data.

Students will learn beginning Mysql for Database mgmt skills, and beginning Php for introductory programming skills.

Students completing this course will be able to create websites that manage dynamic online information.

Many large and medium size organizations need to manage online data for shopping carts, room reservations,

Product inquiries, customer accounting, service tracking, etc therefore this course will teach students how to

Implement and support these type of business environments.
