

STRATEGY #7 STUDYING VS. LEARNING

In the book *Teach Students How to Learn*, McGuire explains that many students are in "study mode" not "learn mode." Moving students up Bloom's taxonomy (from knowledge and comprehension towards analysis and evaluation) helps them *learn* the material, not just study it.

THREE EASY THINGS YOU CAN DO:

1. Have students articulate the difference between "studying" and "learning" and discuss with their peers.

2. Ask your students, *Would you prepare more to make an A on a test or teach the material to the class?*

3. Have students teach the **material**--to pretend audiences, real ones, etc. It is the best way to learn and not just study!
