## Post-Lab Questions: Heat of Solution

1. A metal sample weighing 63.2 g with a temperature of $100.0{ }^{\circ} \mathrm{C}$ was placed in a calorimeter containing 41.0 g of water at $24.5^{\circ} \mathrm{C}$. The equilibrium temperature of the water and metal was found to be $35.0^{\circ} \mathrm{C}$.
A. What was $\Delta \mathrm{T}$ for the water? $\left(\Delta \mathrm{T}=\mathrm{T}_{\text {final }}-\mathrm{T}_{\text {initial }}\right)$ $\qquad$ ${ }^{\circ} \mathrm{C}$
B. What was $\Delta \mathrm{T}$ for the metal? $\qquad$
C. Taking the specific heat of water to be $4.184 \mathrm{~J} / \mathrm{g}{ }^{\circ} \mathrm{C}$, calculate the specific heat of the metal using Eq. 5.
$\qquad$
2. When 5.00 g of $\mathrm{KNO}_{3}$ were dissolved in $49.00 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$ at $24.00^{\circ} \mathrm{C}$ inside a calorimeter, the temperature of the resulting solution fell to $15.60^{\circ} \mathrm{C}$.
A. Is this reaction endothermic or exothermic?

Explain:
B. Calculate the heat lost or gained by the solution chemicals (this is $\mathrm{Q}_{\text {soln }}$ ) in the calorimeter.

$$
\mathrm{Q}_{\text {soln }}=\ldots \text { Joules }
$$

C. What is $\mathrm{Q}_{\mathrm{rxn}}$ for the reaction that occurred?
$\mathrm{Q}_{\mathrm{rxn}}=$ $\qquad$ Joules
D. Calculate the heat of this reaction, $\Delta \mathrm{H}$, in Joules $/ \mathrm{g} \mathrm{KNO}_{3}$.

$$

## Part A: Reactant Order Determination

Calculate the value of $m$ (order with respect to acetone) to TWO decimal places. This means you have to use logarithms. Show calculations. Then round off to the nearest integer to get the true value for $m$.

$$
\mathrm{m}=
$$

$\qquad$ (2 decimal places)
$\mathrm{m}=$ $\qquad$ (nearest integer)

Calculate the value of n (order with respect to the $\mathrm{H}^{+}$):

$$
\mathrm{n}=
$$ (2 decimal places)

$$
\mathrm{n}=
$$

$\qquad$ (nearest integer)

Calculate the value of $p$ (order with respect to the $I_{2}$ ):

$$
\mathrm{p}=\ldots \text { (2 decimal places }) \quad \mathrm{p}=\ldots \text { (nearest integer) }
$$

Write the overall rate law: $\qquad$

## Part B: Determination of the Rate Constant, k

Given the values of $m, n$, and $p$, calculate the rate constant $k$ (with correct units) for each mixture by simply substituting those orders, the initial concentrations, and the observed rate from the Table 2 above into Equation 3.

Table 3. Rate Constant, k

| Mixture | A | B | C | D | average | Units of k |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| k |  |  |  |  |  |  |

Show calculations for $k$ value of Mixture A:
$\qquad$

## Part C: Prediction of Reaction Rate in Your Mixture

Initial concentrations (from Table 2):

$$
[\text { acetone }]_{\text {ini }} \ldots \mathrm{M} \quad\left[\mathrm{H}^{+}\right]_{\text {ini }} \ldots \mathrm{M} \quad\left[\mathrm{I}_{2}\right]_{\text {ini }} \ldots \quad \mathrm{M}
$$

Calculate the predicted rate based on your determined rate law in Part A as well as your average rate constant (from Part B).

Predicted rate: $\qquad$ M/sec

Calculate the predicted time (in seconds) for reaction based on $\left[\mathrm{I}_{2}\right]_{\mathrm{ini}}$ and the value for the predicted rate above using:

Rate $=\left[I_{2}\right]_{\text {ini }} /$ (time)
Predicted time: $\qquad$ sec

Observed average time for reaction $\qquad$ sec (from Table 1 above)

Calculate the percent difference between the observed and predicted times below:
\% difference: $\qquad$
$\qquad$
$\qquad$

## Part D: Energy of Activation Determination

## PROBLEM SET - Use provided data below

Fill Table 4 below.

Table 4. Reaction Rate Data for Mixture $\underline{\underline{\mathbf{D}} .}$

| Temp $\left({ }^{\circ} \mathrm{C}\right)$ | Temp <br> $($ Kelvin $)$ | Time (sec) | Rate $=\left[\mathrm{I}_{2}\right]_{\text {ini }} /$ (time) <br> (NOTE: Use $\left[I_{2}\right]_{\text {ini }}$ from Mixture D) |
| :---: | :---: | :---: | :---: |
| 10. |  | 208 |  |
| 22 |  | 93 |  |
| 40. |  | 28 |  |

Fill Table 5 below by calculating the rate constant at each temperature using rate from Table 4 above, initial concentrations for Mixture D (Table 2) and your experimentally determined rate law (from Part A).

Table 5. Calculated Values for Arrhenius Plot

| Temperature | k | $\ln \mathrm{k}$ (y-axis) <br> (two decimal places) | $1 / \mathrm{T}(x$-axis) <br> $\left(\mathrm{Kelvin}^{-1}\right)$ |
| :---: | :---: | :---: | :---: |
| $10^{\circ} \mathrm{C}$ |  |  |  |
| $22^{\circ} \mathrm{C}$ |  |  |  |
| $40^{\circ} \mathrm{C}$ |  |  |  |

Construct an Arrhenius plot by graphing ln k vs. 1 / T. Find the slope of the best fitting (straight) line through the points. Show your calculations below: Alternatively, you can use MS Excel to construct your graph; write the trendline equation below.

Slope $=$ $\qquad$ OR Trendline Equation (MS Excel): $\qquad$

From Equation 2, we see that the slope $=-\mathrm{E}_{\mathrm{a}} / \mathrm{R}$ where $\mathrm{R}=3.814 \mathrm{~J} / \mathrm{mol} \mathrm{K}$. Use this relationship to calculate the value of $\mathrm{E}_{\mathrm{a}}$ :
$\mathrm{E}_{\mathrm{a}}=$ $\qquad$ $\mathrm{kJ} / \mathrm{mol}$
$\qquad$
$\qquad$

Pre-Lab Questions: The Iodination of Acetone

1. In a reaction involving the iodination of acetone, the following volumes were used to make up the reaction mixture.
1.0 mL 4.0 M acetone $+1.0 \mathrm{~mL} 1.0 \mathrm{M} \mathrm{HCl}+1.0 \mathrm{~mL} 0.0050 \mathrm{M} \mathrm{I}_{2}+2.0 \mathrm{~mL} \mathrm{H}_{2} \mathrm{O}$
a. Calculate the initial (diluted) concentration of acetone in the reaction mixture.

$$
[\text { acetone }]_{\text {ini }}=
$$

$\qquad$
b. Calculate the initial (diluted) concentration of the hydrogen ion, $\mathrm{H}^{+}$, in the reaction mixture.

$$
\left[\mathrm{H}^{+}\right]_{\mathrm{ini}}=
$$

$\qquad$
c. Calculate the initial (diluted) concentration of iodine, $\mathrm{I}_{2}$, in the reaction mixture.

$$
\left[\mathrm{I}_{2}\right]_{\mathrm{ini}}=
$$

$\qquad$
2. Using the reaction mixture in Problem 1, a student found that it took 300 seconds for the color of the $\mathrm{I}_{2}$ to disappear.
a. What was the rate of the reaction?

$$
\text { rate }=
$$

$\qquad$
b. Given the rate from Part a and the initial concentrations of acetone, $\mathrm{H}^{+}$ion, and $\mathrm{I}_{2}$ in the reaction mixture, write Equation 3 as it would apply to the mixture.

$$
\text { rate }=
$$

c. What are the unknowns that remain in the equation in Part b?
$\qquad$
$\qquad$
3. A second reaction mixture was made up in the following way:
2.0 mL 4.0 M acetone $+1.0 \mathrm{~mL} 1.0 \mathrm{M} \mathrm{HCl}+1.0 \mathrm{~mL} 0.0050 \mathrm{M} \mathrm{I}_{2}+1.0 \mathrm{~mL} \mathrm{H}_{2} \mathrm{O}$
a. What were the initial concentrations of acetone, $\mathrm{H}^{+}$ion, and $\mathrm{I}_{2}$ in the reaction mixture?
[acetone $]_{\text {ini }}$ $\qquad$ $\mathrm{M} ; \quad\left[\mathrm{H}^{+}\right]_{\text {ini }}$ $\qquad$ $\mathrm{M} ; \quad\left[\mathrm{I}_{2}\right]_{\text {ini }}$ $\qquad$ M
b. It took 140 seconds for the $\mathrm{I}_{2}$ color to disappear from the reaction mixture when it occurred at the same temperature as the reaction in Problem 2.

What was the rate of the reaction?

Write Equation 3 as it would apply to the second reaction mixture:
rate $=$
c. Solve for the value of m , the order of the reaction with respect to acetone. (Use the logarithm method and calculate the value of $m$ to two decimal places and then round to the nearest integer.)
$\mathrm{m}=$ $\qquad$ (2 decimal places)
$\mathrm{m}=$ $\qquad$ (nearest integer)
$\qquad$

Table 1. Reaction Rate Data

| Reaction <br> Mixture | Time (sec) <br> for color <br> change | Relative <br> Rate $=1 / \mathrm{t}$ | $\left[\mathrm{I}^{-}\right]_{\text {ini }}$ | $\left[\mathrm{BrO}_{3}\right]_{\text {ini }}$ | $\left[\mathrm{H}^{+}\right]_{\text {ini }}$ | Room <br> Temp <br> $\left({ }^{\circ} \mathrm{C}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |

| Varying conditions for Mixture 2 | Time (sec) for <br> color change | Temp $\left({ }^{\circ} \mathrm{C}\right)$ |
| :---: | :---: | :---: |
| Hot: $\sim 40^{\circ} \mathrm{C}$ |  |  |
| Cold: $\sim 10^{\circ} \mathrm{C}$ |  |  |
| With a catalyst |  |  |

The reactant concentrations in the reaction mixture are not those of the stock solutions, since the reagents were diluted by the other solutions. The final volume of the reaction mixture is 25 mL in all cases. We can calculate the concentrations of all reactants in the table above $\left(\mathrm{M}_{1} \mathrm{~V}_{1}=\mathrm{M}_{2} \mathrm{~V}_{2}\right)$.

## Determination of the Orders of the Reaction

Given the data in the table, the problem is to find the order for each reactant and the rate constant for the reaction. Since we are dealing with relative rates, we can modify Equation 2 to read as follows:

$$
\begin{equation*}
\text { relative rate }=\mathrm{k}^{\prime}\left[\mathrm{I}^{-}\right]^{\mathrm{m}}\left[\mathrm{BrO}_{3}^{-}\right]^{\mathrm{n}}\left[\mathrm{H}^{+}\right]^{\mathrm{p}} \tag{5}
\end{equation*}
$$

We need to determine the relative rate constant $\mathrm{k}^{\prime}$ and the orders $\mathrm{m}, \mathrm{n}$ and p in such a way as to be consistent with the data in Table 1.

The solution to this problem is quite simple once you make a few observations on the reaction mixtures. Each mixture (2 to 4) differs from Reaction Mixture 1 in the concentration of only one species (see table). This means that for any pair of mixtures that includes reaction Mixture 1, there is only one concentration that changes. We can then find the order for the reactant whose concentration was changed.
$\qquad$ Section: $\qquad$

Write Equation 5 below for Reaction Mixtures 1 and 2, substituting the relative rates and the initial concentrations of $\mathrm{I}^{-}, \mathrm{BrO}_{3}^{-}$, and $\mathrm{H}^{+}$from Table 1.

Relative rate $1=\ldots=k\left[\begin{array}{ll}]^{m}[\quad]^{n}[\quad]^{p}\end{array}\right.$
Relative rate $2=$ $\qquad$ $=\mathrm{k}[\quad]^{\mathrm{m}}[$ $]^{\mathrm{n}}[\quad]^{\mathrm{p}}$

Solve for m , the order of the reaction with respect to the $\mathrm{I}^{-}$, to two decimal places and then round off to the nearest integer.

$$
\mathrm{m}=\ldots \quad \mathrm{m}=\ldots \text { (nearest integer })
$$

Apply the same approach to find the value of $n$, the order of the reaction with respect to the $\mathrm{BrO}_{3}{ }^{-}$ion. Show your set-up.

$$
\mathrm{n}=\ldots \quad \mathrm{n}=\ldots \quad \text { (nearest integer })
$$

Apply the method once again to find p , the order with respect to the $\mathrm{H}^{+}$ion. Show your setup.

$$
\mathrm{p}=\ldots \quad \mathrm{p}=\square \text { (nearest integer) }
$$

Having found $\mathrm{m}, \mathrm{n}$, and p (nearest integers, the rate law is written as:

$$
\text { rate }=
$$

$\qquad$
$\qquad$

## Determination of the Value of Relative Rate Constant

The relative rate constant, $\mathrm{k}^{\prime}$ can be calculated by substitution of $\mathrm{m}, \mathrm{n}, \mathrm{p}$ and the known rates and reactant concentrations into Equation 5. Fill Table 2 below by calculating k for Reaction Mixtures 1-4.

Table 2. Reaction Constant, k

| Reaction | 1 | 2 | 3 | 4 | Average | Units of k |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| k |  |  |  |  |  |  |

Calculations for each k value:

Briefly explain why k should have nearly the same value for each of the Mixtures $1-4$.
Why? $\qquad$

## Determination of Relative Rate and Reaction Time for Mixture 5

For Reaction Mixture 5, use $\mathrm{k}_{\text {ave }}$ from Table 2 above and the appropriate concentrations from Table 1 in Equation 5 to predict (calculate) the relative rate. Then use this value to predict (calculate) the reaction time, t , for Mixture 5. Show your calculations below.
$\qquad$ $\mathrm{t}_{\text {predicted }}$ $\qquad$ $\mathrm{t}_{\text {observed }}$ $\qquad$
Calculate the percent difference of your reaction times.
$\qquad$
$\qquad$

## The Effect of Temperature on Reaction Rate: The Activation Energy

To find the activation energy for the reaction, transfer the reaction times and temperatures onto Table 3 and fill in the remaining boxes using Mixture 2. Since the reactions at the different temperatures all involve the same reactant concentrations, the rate constants, k , for two different mixtures will have the same ratio as the reaction rates themselves for the two mixtures. This means that in the calculation of $\mathrm{E}_{\mathrm{a}}$, we can use the observed relative rates instead of rate constants.

Table 3. Reaction Rate at Different Temperatures for Mixture 2.

|  | Room Temp | Hot: $\sim 40^{\circ} \mathrm{C}$ | Cold: $\sim 10{ }^{\circ} \mathrm{C}$ |
| :---: | :--- | :--- | :--- |
| Time (sec) <br> for color change |  |  |  |
| Actual Temp <br> $\left({ }^{\circ} \mathrm{C}\right)$ |  |  |  |
| Actual Temp <br> (Kelvin) |  |  |  |
| / Temp <br> $\left(\right.$ Kelvin $\left.^{-1}\right)$ |  |  |  |
| Relative Rate $=1 /$ time |  |  |  |
| $\ln$ (Relative Rate) |  |  |  |

Use the appropriate values from Table 3 and plot $\ln$ (relative rate) vs $1 / \mathrm{T}$ in Microsoft Excel. ${ }^{\circledR}$ Insert a linear trendline and display both the equation and $r^{2}$ value of the trendline on the graph. Copy these in the space below. Make certain to include your Arrhenius plot with this report.

Trendline Equation: $\qquad$

$$
\mathrm{r}^{2}=
$$

$\qquad$

The slope of the line equals $-\mathrm{E}_{\mathrm{a}} / \mathrm{R}$, where $\mathrm{R}=8.314$ Joules $/$ (mole K). Use this relationship to calculate the activation energy, $\mathrm{E}_{\mathrm{a}}$, for your reaction in $\mathrm{kJ} / \mathrm{mol}$.

$$
E_{a}=
$$

$\qquad$ kJ / mol

Name: $\qquad$ Section: $\qquad$

The Effect of a Catalyst on Reaction Rate

| Room Temperature | Catalyzed |
| :---: | :---: |
| Mixture 2 | Mixture 2 |

Time for color to appear (sec)

Would you expect the activation energy, $\mathrm{E}_{\mathrm{a}}$, for the catalyzed reaction to be greater than, less than, or equal to the activation energy for the uncatalyzed reaction? Briefly explain.
$\qquad$

Pre-Lab Questions: Iodine Clock Reaction

1. A student studied the clock reaction described in this experiment. She set up a reaction mixture by mixing 10.0 mL of $0.010 \mathrm{M} \mathrm{KI}, 10.0 \mathrm{~mL}$ of $0.0010 \mathrm{M} \mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}, 20.0 \mathrm{~mL}$ of $0.040 \mathrm{M} \mathrm{KBrO}_{3}$ and 10.0 mL of 0.10 M HCl using the procedure given. It took 40.0 seconds for the color to turn blue.
a. She found the concentration of each reactant in the reacting mixture by realizing that the number of moles of each reactant did not change when that reactant was mixed with the others, but that its concentration did. The volume of the mixture was 50.0 mL . Find the initial concentration of each reactant.
$\left[\mathrm{I}^{-}\right]_{\text {ini }}=$ $\qquad$ $\mathrm{M} ; \quad\left[\mathrm{BrO}_{3}{ }^{-}\right]_{\mathrm{ini}}=$ $\qquad$ $\mathrm{M} ; \quad\left[\mathrm{H}^{+}\right]_{\text {ini }}=$ $\qquad$ M
b. What is the relative rate of the reaction (1/time)?
2. The student repeated the experiment using reaction mixture 1 by mixing 10 mL of 0.010 $\mathrm{M} \mathrm{KI}, 10 \mathrm{~mL}$ of $0.0010 \mathrm{M} \mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}, 10 \mathrm{~mL}$ of $0.040 \mathrm{M} \mathrm{KBrO}_{3}, 10 \mathrm{~mL}$ of 0.10 M HCl and 10 mL of $\mathrm{H}_{2} \mathrm{O}$. It took 75 seconds to turn blue.

Find the initial concentration of each reactant after mixing:

$$
\left[\mathrm{I}^{-}\right]_{\text {ini }}=\ldots \mathrm{M} ; \quad\left[\mathrm{BrO}_{3}^{-}\right]_{\mathrm{ini}}=\ldots \mathrm{M} ; \quad\left[\mathrm{H}^{+}\right]_{\mathrm{ini}}=\ldots \mathrm{M}
$$

What is the relative rate of the reaction (1/time)?
3. Use the information above to determine the order with respect to $\mathrm{BrO}_{3}{ }^{-}$.

$$
\mathrm{n}=
$$

$\qquad$
$\qquad$

Pre-Lab Questions: Equilibrium Constant Determination for $\mathrm{FeSCN}^{+2}$

1. A student mixes 5.00 mL of $2.00 \times 10^{-3} \mathrm{M} \mathrm{Fe}\left(\mathrm{NO}_{3}\right)_{3}$ with 5.00 mL of $2.00 \times 10^{-3} \mathrm{M}$ KSCN. She finds that in the equilibrium mixture, the concentration of $\mathrm{FeSCN}^{2+}$ is $1.40 \times 10^{-4} \mathrm{M}$. Find $\mathrm{K}_{\mathrm{c}}$ for $\mathrm{Fe}^{3+}(\mathrm{aq})+\mathrm{SCN}^{-}(\mathrm{aq}) \rightleftharpoons \mathrm{FeSCN}^{2+}(\mathrm{aq})$.

Step 1. Calculate the initial, diluted concentrations of the $\mathrm{Fe}^{3+}$ and $\mathrm{SCN}^{-}$ions in the total of 10.00 ml solution using $\mathrm{M}_{1} \mathrm{~V}_{1}=\mathrm{M}_{2} \mathrm{~V}_{2}$
$\left[\mathrm{Fe}^{3+}\right]$ $\qquad$ [ $\mathrm{SCN}^{-}$
Step 2. Use the initial concentrations of the $\mathrm{Fe}^{3+}$ and $\mathrm{SCN}^{-}$ions along with the equilibrium concentration of the $\mathrm{FeSCN}^{2+}$ ion and the reaction stoichiometry to determine the equilibrium concentrations of $\mathrm{Fe}^{3+}$ and $\mathrm{SCN}^{-}$.

Step 3. Solve for the value of $\mathrm{K}_{\mathrm{c}}$ for the reaction. (Use Eq. 2 and the results of Step 2.)

$$
\mathrm{K}_{\mathrm{c}}=
$$

$\qquad$

Name: $\qquad$
Data: Determination of the Equilibrium Constant for the Formation of $\mathrm{FeSCN}^{+2}$

$\qquad$

## Post-Lab Questions: Determination of the Equilibrium Constant for the Formation of $\mathrm{FeSCN}^{+2}$

1. Are the $\mathrm{K}_{\mathrm{c}}$ values on the previous page consistent? If not, suggest a reason for any large differences.
2. In carrying out this analysis, we made the assumption that the reactants were reacting as a $1: 1$ mole ratio, as given by Equation 1. There is no inherent reason why the reaction might not have been a $1: 2$ mole ratio:

$$
\begin{equation*}
\mathrm{Fe}^{3+}(a q)+2 \mathrm{SCN}^{-}(a q) \rightleftharpoons \mathrm{Fe}(\mathrm{SCN})_{2}{ }^{+}(a q) \tag{3}
\end{equation*}
$$

a. Fill in the equilibrium values in the chart below using your experimental data and this new reaction ratio:

| Reaction | $\mathbf{F e}^{+2}(a q)+$ | $\mathbf{2 S C N} \mathbf{S C}^{-}(a q) \rightleftharpoons$ | $\mathbf{F e}(\mathbf{S C N}) \mathbf{2}^{+}(\mathbf{a q})$ |
| :---: | :--- | :--- | :--- |
| test tube 1 mixture <br> at equilibrium |  |  |  |
| test tube 5 mixture <br> at equilibrium |  |  |  |

b. Calculate the value of $K_{c}$ using the data from the test tube 1 mixture, assuming that the reaction is actually the one shown in equation 3 .
c. Calculate the value of $K_{c}$ using the data from the test tube 5 mixture, assuming that the reaction is actually the one shown in equation 3 .
d. Compare the $\mathrm{K}_{\mathrm{c}}$ values that you calculated in parts a and b above. Are they consistent? Do you think Reaction 3 is occurring?
$\qquad$ Section: $\qquad$

## Pre-Lab Questions

1. A student withdraws 3.00 mL of supernate from a saturated solution of $\mathrm{KHC}_{8} \mathrm{H}_{4} \mathrm{O}_{4}$ at room temperature ( $\sim 22^{\circ} \mathrm{C}$ ). This sample was titrated to the phenolphthalein endpoint and 12.85 mL of 0.0997 M NaOH was required.
a. Calculate moles of $\mathrm{HC}_{8} \mathrm{H}_{4} \mathrm{O}_{4}^{-}$in the 3.00 mL aliquot.
b. Calculate the $\left[\mathrm{HC}_{8} \mathrm{H}_{4} \mathrm{O}_{4}^{-}\right]_{\text {equil }}$ (a.k.a. solubility).
c. What is the value for $\left[\mathrm{K}^{+}\right]_{\text {equil }}$ ?
d. Calculate $\mathrm{K}_{\text {sp }}$ at $22{ }^{\circ} \mathrm{C}$.
2. A similar titration as in \#1 above was done for a saturated solution of KHP in 0.500 M KCl also at room temperature. The withdrawn supernate was 5.00 mL (instead of 3.00 $\mathrm{mL})$. The volume of titrant $(0.0997 \mathrm{M} \mathrm{NaOH})$ used was 8.35 mL .
a. Calculate the new solubility in 0.500 M KCl .
$\qquad$ Section: $\qquad$
b. Calculate the \% decrease in solubility by using equation 5 .
3. Two more titrations like the one in \#1 above were done at two other temperatures and a plot of $\ln \mathrm{K}_{\mathrm{sp}}$ vs $1 / \mathrm{T}$ (in Kelvin) was constructed and yielded the trendline equation below. Calculate $\Delta \mathrm{H}^{\circ}$ soln $(\mathbf{k J} / \mathbf{m o l})$ and $\Delta \mathrm{S}^{\circ}{ }_{\text {soln }}\left(\mathbf{k J} / \mathbf{K}^{\prime} \mathbf{m o l}\right)$.
$y=-4480 x+13.8$

$$
\Delta \mathrm{H}_{\text {soln }}^{\circ}=\ldots \mathbf{k J} / \mathbf{m o l} \quad \Delta \mathrm{S}^{\circ}{ }_{\text {soln }}=\ldots \mathbf{k J} / \mathbf{K} \cdot \mathbf{m o l}
$$

$\qquad$

## Data and Calculations

Concentration of standard NaOH : $\qquad$ M

| Sample <br> of sat'd <br> KHP | Temperature <br> (Kelvin) | Vol KHP <br> acid <br> $(\mathrm{mL})$ | Vol NaOH <br> base <br> $(\mathrm{mL})$ | $\left[\mathrm{HC}_{8} \mathrm{H}_{4} \mathrm{O}_{4}{ }^{-}\right]_{\mathrm{eq}}$ <br> (solubility) <br> (M) | $\left[\mathrm{K}^{+}\right]_{\mathrm{eq}}$ <br> $(\mathrm{M})$ | $\mathrm{K}_{\text {sp }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| At room <br> temp |  |  |  |  |  |  |
| warmer |  |  |  |  |  |  |
| colder |  |  |  |  |  |  |

Show sample calculations for $\left[\mathrm{HC}_{8} \mathrm{H}_{4} \mathrm{O}_{4}^{-}\right]_{\mathrm{eq}},\left[\mathrm{K}^{+}\right]_{\mathrm{eq}}$ and $\mathrm{K}_{\text {sp }}$ below:

Prepare an Excel ${ }^{\circledR}$ chart filling in $\mathrm{K}_{\text {sp }}$ and T values. Have the computer program calculate $\ln \left(\mathrm{K}_{\mathrm{sp}}\right)$ and $1 / \mathrm{T}$ for the 4 sets of data.

Plot a scatter graph with $\mathrm{y}=\ln \left(\mathrm{K}_{\text {sp }}\right)$ values and $\mathrm{x}=1 / \mathrm{T}$ (Kelvin) and display the linear trendline equation of your plot. Attach your graph.

Write out the linear trendline equation $\qquad$
$\qquad$ Section: $\qquad$

## Post-Lab Questions:

1. Based on your results at room temperature for saturated KHP in water, calculate the solubility of KHP in $\mathrm{g} / \mathrm{L}$.
2. What will happen to the solubility of saturated KHP at room temperature if NaOH is added to the solution? (increase, decrease or no change)? Explain your reasoning.

Additionally, how would adding NaOH affect the $\mathrm{K}_{\text {sp }}$ of KHP at room temperature?
3. Calculate the $\%$ decrease in solubility at room temperature between saturated KHP and saturated KHP in 0.50 M KCl according to equation 5 .
$\qquad$
4. Calculate the \% difference in $\mathrm{K}_{\text {sp }}$ at room temperature, equation 6. Based on a $10 \%$ acceptable difference, are your $\mathrm{K}_{\text {sp }}$ values in water and in KCl the same? If they are not within $10 \%$ of each other, propose a specific error that might have caused this significant difference in $\mathrm{K}_{\mathrm{sp}}$.
5. Plot $\ln \mathrm{K}_{\mathrm{sp}}$ vs $1 / \mathrm{T}$ (Kelvin) and determine the linear trendline equation of your plot. Attach your graph.

Linear Trendline Equation:
6. Calculate the $\Delta \mathrm{H}^{\circ}$ soln and $\Delta \mathrm{S}_{\text {soln }}{ }^{\mathrm{o}}$ for the dissolution of solid KHP from the trendline equation of your scatter graph; $\ln \left(\mathrm{K}_{\text {sp }}\right)$ vs $1 / \mathrm{T}($ Kelvin $)$. R is the gas constant 8.314 J $\mathrm{mol}^{-1} \mathrm{~K}^{-1}$
$\Delta \mathrm{H}^{\circ}{ }_{\text {soln }}=$ $\qquad$ kJ / mol
$\Delta \mathrm{S}^{\circ}{ }_{\text {soln }}=$ $\qquad$ kJ / K•mol
$\qquad$

Pre-Lab Questions: Buffers and Determination of Equivalent Mass and $K_{a}$ of an Unknown Acid

1. What is the equivalent mass of each of the following acids?
2. $\mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$
3. $\mathrm{KHCO}_{3}$
4. $\mathrm{H}_{2} \mathrm{SO}_{3}$

## 4. $\mathrm{H}_{3} \mathrm{PO}_{4}$

2. It is found that 24.6 mL of 0.116 M NaOH is needed to titrate 0.293 g of an unknown acid to the phenolphthalein end point. Calculate the equivalent mass of the acid.
$\qquad$
$\qquad$

## Data and Questions

## Part 1A: pH of Unknown and Buffer Solutions

Enter in the appropriate space the name of the indicator used, the observed color of unknown after addition of the indicator, and the estimated pH value from the pH paper for the unknown.

Liquid Unknown \#: $\qquad$
pH paper estimate: $\qquad$ (3-pH unit range)

| Indicator Used | Color of <br> Unknown | Color of Buffer <br> $\mathrm{pH}=$ | Color of Buffer <br> $\mathrm{pH}=$ | Color of Buffer <br> $\mathrm{pH}=$ 信 |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

Estimate pH based on matching of colors $=$ $\qquad$ (within 0.5 pH unit)

## Part 1B: pH of Acetic Acid Solutions

(Note: $\mathrm{HAc}=\mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$, acetic acid).

|  | $1.0 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ | $0.10 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ | $0.010 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ |
| :---: | :--- | :--- | :--- |
| pH |  |  |  |
| Ka |  |  |  |
| $\%$ dissociation |  |  |  |

SHOW YOUR CALCULATIONS ON THE NEXT PAGE.

Name: $\qquad$ Section: $\qquad$
$1.0 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ (aq):
$0.10 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}(\mathrm{aq})$ :
$0.010 \mathrm{M} \mathrm{HC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}(\mathrm{aq}):$
$\qquad$

## Part 2: pH of Salt Solutions

1. PREDICT whether each of the salt solutions below is expected to be acidic, neutral, or basic:

NaCl $\qquad$
$\mathrm{NaC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ $\qquad$
$\mathrm{Na}_{2} \mathrm{CO}_{3}$ $\qquad$
$\mathrm{NH}_{4} \mathrm{Cl}$ $\qquad$
$\mathrm{KNO}_{3}$ $\qquad$
$\mathrm{ZnCl}_{2}$ $\qquad$
2. Using the pH meter immersed in each salt solution, determine the actual pH :

$$
\mathrm{NaCl}
$$

$\mathrm{NaC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}$ $\qquad$ $\mathrm{Na}_{2} \mathrm{CO}_{3}$ $\qquad$
$\mathrm{NH}_{4} \mathrm{Cl}$ $\qquad$
$\mathrm{KNO}_{3}$ $\qquad$
$\mathrm{ZnCl}_{2}$ $\qquad$
3. Write balanced MOLECULAR, IONIC, and NET-IONIC equations for the hydrolysis reactions of each salt solution. From the net-ionic equation, verify that the reaction is acidic, neutral or basic.
A. $\quad \mathrm{NaCl}(\mathrm{aq})$ :

Molecular:
acidic neutral
or
Ionic:
basic?

## Net-Ionic:

B. $\mathrm{NaC}_{2} \mathrm{H}_{3} \mathrm{O}_{2}(\mathrm{aq})$

Molecular:

Ionic:

## Net-Ionic:

Name: $\qquad$
C. $\mathrm{Na}_{2} \mathrm{CO}_{3}(\mathrm{aq})$

Molecular:

Ionic:

## Net-Ionic:

D. $\mathrm{NH}_{4} \mathrm{Cl}(\mathrm{aq})$

Molecular:

Ionic:

## Net-Ionic:

E. $\quad \mathrm{KNO}_{3}(\mathrm{aq})$

Molecular:

Ionic:

Net-Ionic:
F. $\quad \mathrm{ZnCl}_{2}(\mathrm{aq})$

Molecular:

$\qquad$

## Part 3: Determination of $K_{a}$ and Properties of a Buffer

Solid Unknown Number: $\qquad$

1. Original pH of the half neutralized solution: $\qquad$
2. Calculate $K_{a}$ of the Weak acid:
3. Fill in table:

|  | tap water <br> (original pH$)$ | tap water <br> $(\mathrm{pH}$ after $)$ | Buffer <br> $($ original pH$)$ | Buffer <br> $(\mathrm{pH}$ after) |
| :--- | :--- | :--- | :--- | :--- |
| addition of <br> 0.1 M HCl |  |  |  |  |
| addition of <br> 0.1 M NaOH |  |  |  |  |

4. How does the table above show that the half-neutralized solution is indeed a buffer?
5. Using the data on your table above, comment on the buffering ability of your halfneutralized solution in comparison to the tap water.
6. Comment on the comparison between adding a strong acid vs a strong base to your buffer solution (i.e. is this solution more resistant to an increase or a decrease in pH ?).

## Part 4: Determination of the Equivalent Mass of an Unknown Acid

Given: $\qquad$ M NaOH

## Fill in the table below

| Sample | Mass <br> unknown <br> acid (g) | Volume <br> NaOH <br> used $(\mathrm{mL})$ | Volume <br> NaOH <br> used (L) | Mol NaOH <br> equal to <br> $\mathrm{Mol} \mathrm{H}^{+}$ | Gram Equivalent Mass <br> of Acid (g/mol H |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Trial 1 |  |  |  |  |  |
| Trial 2 |  |  |  |  |  |
|  |  |  |  |  | Average GEM: <br> $\mathrm{g} / \mathrm{mol} \mathrm{H}^{+}$ |

Show sample calculations below

## Part 5: Determination of the $K_{a}$ and Equivalent Mass of an Unknown Acid using LabQuest Mini

Use the same unknown sample as part 4.
Solid Unknown Number: $\qquad$

1. Determine the approximate mass desired to reach the equivalence point in approximately 15 ml of NaOH added.

Approximate mass to use $=(\text { mass of acid/volume of base })_{\text {part } 4 \times 15 \mathrm{ml}}$ desired
2. Mass accurately weighed into a clean, dry 150 ml beaker.
3. Using the graph, determine the volume and pH of titrant at equivalence point.

Volume $\qquad$ pH $\qquad$
4. Using the graph, determine the volume and pH at the half-equivalence point.

Volume $\qquad$ pH $\qquad$
$\qquad$ Section: $\qquad$
5. Solve for the $\mathrm{pK}_{\mathrm{a}}, \mathrm{K}_{\mathrm{a}}$, and gram equivalent mass of your unknown acid using the data collected in part 5.

Unknown \#: $\qquad$
6. Calculate the average of all three GEM that you determined (two from part 4 and one from part 5).
7. Why is the equivalence point NOT at pH 7 ?
8. Identify the following areas on the weak acid/strong base titration curve.
A) Weak acid
B) Buffer zone
C) Equivalence point, salt
D) Strong base zone
E) Half equivalence point
$\qquad$ Section: $\qquad$

Post-Lab Questions: Buffers and Determination of Equivalent Mass and $\mathrm{K}_{\mathrm{a}}$ of an Unknown Acid

1. A buffer was prepared by mixing 50.0 mL of 0.10 M HX and 25.0 mL of 0.10 M NaOH . The $\mathrm{K}_{\mathrm{a}}$ of HX is $1.5 \times 10^{-6}$. Calculate the pH of this buffer.
2. The following values were experimentally determined for the titration of 0.145 g of a weak acid with 0.100 M NaOH :

| Volume of $\mathbf{N a O H}, \mathbf{m L}$ | $\mathbf{p H}$ |
| :---: | :---: |
| 0.0 | 2.88 |
| 5.0 | 4.15 |
| 10.0 | 4.58 |
| 12.5 | 4.76 |
| 15.0 | 4.93 |
| 20.0 | 5.36 |
| 24.0 | 6.14 |
| 24.9 | 7.15 |
| 25.0 | 8.73 |
| 26.0 | 11.29 |
| 30.0 | 11.96 |

A. Construct a titration curve ( pH vs Volume of NaOH ).
B. Examine the graph for the required volume to reach the equivalence point?
C. Examine the graph and state the pH at the half-equivalence point?
D. Determine the $K_{a}$ of the acid.
E. Calculate the gram equivalent mass of the acid.
$\qquad$
3. The following acid-base indicators are available to indicate the end point of this weak acid/strong base titration. Which of them would be most appropriate? Explain.

Indicator
Bromphenol blue Bromthymol
Thymol blue

## Color Change

Acid Form
yellow
blue
yellow
pH Transition
3.0-5.0
6.0-7.6
8.0-9.6
$\qquad$
$\qquad$

It is possible to summarize the directions for analysis of the Group I cations in what is called a flow diagram. In the diagram, vertical lines link successive steps in the procedure. Reactant cations or reactant substances containing the ions are at the top end of each line and products formed are at the bottom end. On the product end, a horizontal line separates the solid products on the left and the solution products on the right. Reagents and conditions used to carry out each step are placed alongside the lines. A partially completed flow diagram for the Group I ions follows:

Use this diagram as a brief guide to the procedure. Complete the flow diagram above by directly recording your observations on your known (in the boxes) and unknown (beside the boxes), perhaps using different colored markers.
$\qquad$
$\qquad$

## Experiment Results:

UNKNOWN NUMBER $\qquad$ IONS PRESENT $\qquad$

## Post-Lab Questions: Group I Cations

1. A solution may contain $\mathrm{Ag}^{+}, \mathrm{Pb}^{2+}$, and $\mathrm{Hg}_{2}{ }^{2+}$. A white precipitate forms on addition of 6 M HCl . The precipitate is partially soluble in hot water. The solid remaining after treatment with hot water turns black on addition of $6 \mathrm{M} \mathrm{NH}_{3}$. Which of the ions are present, which are absent, and which remain undetermined? State your reasoning below. NOTE: simply listing ions below without the appropriate reasoning will NOT earn you any credit!

Present $\qquad$
Absent $\qquad$
In Doubt $\qquad$

Name: $\qquad$ Section: $\qquad$

Pre-Lab Assignment: Prepare a complete flow diagram for the separation and identification of the various cations presented in this experiment.
$\qquad$ Section: $\qquad$

## Experiment Results:

UNKNOWN $\qquad$

## Post-Lab Questions:

1. The precipitates of iron(III) ion and manganese(II) ion are hydroxides. What is the purpose of adding $6 \mathrm{M} \mathrm{HNO}_{3}(\mathrm{aq})$ in step 3 of the Group A analysis?
2. In step 2 of Group $\mathrm{B}, \mathrm{Na}_{2} \mathrm{SO}_{4}$ is added. A white precipitate indicates the presence of barium ion. Look up and write down the appropriate $\mathrm{K}_{\text {sp }}$ values and suggest a reason why a calcium precipitate does not form along with the barium precipitate.
3. Describe any modifications (if any) that you discovered that worked for your analysis. How would you improve this experiment?
$\qquad$
4. Test for the Iodide Ion

Acidify a 2 mL sample of a new test solution by adding 6 M HCl . Add 1 mL of 0.1 M $\mathrm{FeCl}_{3}$ to oxidize any $\mathrm{I}^{-}$to $\mathrm{I}_{2}$. Add 1 mL of hexane and agitate the mixture. A purple color of $I_{2}$ in the hexane layer indicates $I^{-}$was present in the original sample.

$$
\begin{equation*}
2 \mathrm{I}^{-}(\mathrm{aq})+2 \mathrm{Fe}^{+3}(\mathrm{aq}) \rightarrow \mathrm{I}_{2}(\mathrm{aq})+2 \mathrm{Fe}^{+2}(\mathrm{aq}) \tag{4}
\end{equation*}
$$

5. Test for the Phosphate Ion
(A) If no $I^{-}$was present, mix about 2 drops of $0.5 \mathrm{M}\left(\mathrm{NH}_{4}\right)_{6} \mathrm{Mo}_{7} \mathrm{O}_{24}$ reagent with 5 drops of $6 \mathrm{M} \mathrm{HNO}_{3}$ to 1 mL of a new test solution.
(B) If $\mathrm{I}^{-}$was present, add 5 drops of $6 \mathrm{M} \mathrm{HNO}_{3}$ to 1 mL of a new test solution and boil the test tube for 5 to 10 minutes to remove the iodide. Then add 2 drops of the ammonium molybdate reagent to the test solution.

A yellow precipitate of ammonium phosphomolybdate, $\left(\mathrm{NH}_{4}\right)_{3} \mathrm{PO}_{4} \cdot 12 \mathrm{MoO}_{3}$, appearing at once or after the mixture has been warmed a few minutes to $40^{\circ} \mathrm{C}$ indicates the presence of $\mathrm{PO}_{4}{ }^{-3}$.

$$
\begin{align*}
& 21 \mathrm{NH}_{4}{ }^{+}(\mathrm{aq})+12\left[\mathrm{Mo}_{7} \mathrm{O}_{24}{ }^{-6}\right](\mathrm{aq})+7 \mathrm{H}_{3} \mathrm{PO}_{4}(\mathrm{aq})+51 \mathrm{H}^{+}(\mathrm{aq}) \rightarrow \\
& 7\left(\mathrm{NH}_{4}\right)_{3} \mathrm{PO}_{4} \cdot 12 \mathrm{MoO}_{3}(\mathrm{aq})+36 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \tag{5}
\end{align*}
$$

Record your observations for your known and unknown solutions below. Determine the identity of your unknown.

## Experiment Observations and Results:

$\qquad$

Section:

## Pre-Lab Assignment:

1. Construct separate flow charts for the identification of the various five anions in a known sample. Refer to Experiment \#10 for guidelines on preparing your flow charts.
$\qquad$ Section: $\qquad$

Post-Lab Assignment: Anion Analysis

1. A solution may contain $\mathrm{Cl}^{-}, \mathrm{CO}_{3}{ }^{-2}, \mathrm{PO}_{4}{ }^{-3}$, and/or $\mathrm{SO}_{4}{ }^{-2}$. No effect is observed upon addition of $6 \mathrm{M} \mathrm{HNO}_{3}$; this resulting mixture will be referred to as solution 1. No effect is observed on addition of $0.1 \mathrm{M} \mathrm{AgNO}_{3}$ to solution 1. A white precipitate is reported on addition of $1 \mathrm{M} \mathrm{BaCl}_{2}$ to solution 1 . Finally, a yellow precipitate is observed on addition of $0.5 \mathrm{M}\left(\mathrm{NH}_{4}\right)_{6} \mathrm{Mo}_{7} \mathrm{O}_{24}$ to solution 1. Which of the ions are present, which are absent, and which remain undetermined? State your reasoning below. NOTE: simply listing ions below without the appropriate reasoning will NOT earn you any credit!

Present $\qquad$
Absent $\qquad$

In Doubt $\qquad$
$\qquad$
$\qquad$

## Pre-Lab Assignment: Electrochemical Cells Experiment

Answer each of the following questions and place the responses on the lines provided.

1. The following data were measured using a nickel electrode as the standard:

$$
\begin{array}{lr}
\mathrm{Cu}^{2+}(\mathrm{aq})+2 e^{-} \rightarrow \mathrm{Cu}(\mathrm{~s}) & 0.62 \mathrm{~V} \\
\mathrm{Ni}^{2+}(\mathrm{aq})+2 e^{-} \rightarrow \mathrm{Ni}(\mathrm{~s}) & 0.00 \mathrm{~V} \\
\mathrm{Fe}^{2+}(\mathrm{aq})+2 e^{-} \rightarrow \mathrm{Fe}(\mathrm{~s}) & -0.15 \mathrm{~V} \\
\mathrm{Al}^{3+}(\mathrm{aq})+3 e^{-} \rightarrow \mathrm{Al}(\mathrm{~s}) & -1.38 \mathrm{~V}
\end{array}
$$

A. Which ion is most easily reduced?
B. Which metal is most easily oxidized?
C. The copper and aluminum electrodes are connected in a battery.

1) Which is the anode? cathode?

Anode: $\qquad$ Cathode: $\qquad$
2) Which is oxidized? reduced?

Oxidized: $\qquad$ Reduced: $\qquad$
3) What will the battery voltage be?
$\qquad$
4) Write a balanced net ionic equation for the reaction that takes place.
$\qquad$

## Experiment

Part 1A: $\boldsymbol{E}^{\circ}$ for: $\mathrm{Zn}\left|1.0 \mathrm{M} \mathrm{Zn}^{+2}\right|\left|1.0 \mathrm{M} \mathrm{Cu}^{+2}\right| \mathrm{Cu}$

Theoretical: $\qquad$ V Experimental: $\qquad$ V Part 1B: $\boldsymbol{E}_{\text {cell }}$ for: $\mathrm{Zn}\left|0.10 \mathrm{M} \mathrm{Zn}^{+2}\right|\left|1.0 \mathrm{M} \mathrm{Cu}^{+2}\right| \mathrm{Cu}$

Theoretical: $\qquad$ V Experimental: $\qquad$ V

Part 1C: $\boldsymbol{E}_{\text {cell }}$ for: $\mathrm{Zn}\left|1.0 \mathrm{M} \mathrm{Zn}^{+2}\right|\left|0.10 \mathrm{M} \mathrm{Cu}^{+2}\right| \mathrm{Cu}$

Theoretical: $\qquad$ V Experimental: $\qquad$ V
$\qquad$ Section: $\qquad$

Part 2: $\boldsymbol{E}^{\mathrm{o}}$ and $\mathbf{K}_{\text {sp }}$ for: $\mathrm{Cu} \mid \mathrm{Cu}(\mathrm{OH})_{2}$ in $1.0 \mathrm{M} \mathrm{OH}^{-}| | 1.0 \mathrm{M} \mathrm{Cu}^{2+} \mid \mathrm{Cu}$

Experimental $\boldsymbol{E}^{\boldsymbol{o}}=$ $\qquad$ V

Calculate experimental $\mathbf{K} s p$ using experimental $\boldsymbol{E}^{\mathrm{o}}$ and the Nernst equation at equilibrium.
$\qquad$

Calculate the theoretical $\boldsymbol{E}^{\mathrm{o}}$ using a literature value for $\mathbf{K s p}=2.2 \times 10^{-20}$.

Theoretical $\boldsymbol{E}^{\boldsymbol{o}}=$ $\qquad$ V

Calculate the \% error in $\boldsymbol{E}^{\mathrm{o}}$.
$\qquad$ Section: $\qquad$

Part 3: $\boldsymbol{E}^{\mathrm{o}}$ and $\mathbf{K}_{\mathrm{f}}$ for: $\mathrm{Cu} \mid \mathrm{Cu}\left(\mathrm{NH}_{3}\right) 4^{2+}$ in $1.0 \mathrm{M} \mathrm{NH}_{3}| | 1.0 \mathrm{M} \mathrm{Cu}^{2+} \mid \mathrm{Cu}$

Experimental $\boldsymbol{E}^{\boldsymbol{o}}=$ $\qquad$ V

Calculate experimental $\mathbf{K}_{f}$ using experimental $\boldsymbol{E}^{\mathbf{o}}$ and the Nernst equation at equilibrium.

Experimental $\mathrm{K}_{\mathrm{f}}=$ $\qquad$

Calculate the theoretical $\boldsymbol{E}^{\mathrm{o}}$ using a literature value for $\mathbf{K}_{\mathrm{f}}=1.7 \times 10^{13}$.

Theoretical $\boldsymbol{E}^{\boldsymbol{o}}=$ $\qquad$ V

Calculate the \% error in $\boldsymbol{E}^{\circ}$.
$\qquad$

## Post-Lab Questions:

1. Sketch and label well with movement arrows the processes occurring in the standard Daniell cell (from Part 1A) while it is operating. Note that the electrode reactions produce and consume ions at the electrodes.
2. Briefly comment on how well your experimental cell potentials match the theoretical cell potentials in the standard and nonstandard Daniell cells from parts $1 \mathrm{~A} / 1 \mathrm{~B} / 1 \mathrm{C}$.
3. How should the voltage change in the Daniell cell if the zinc solution is made more dilute (and the concentration of the copper solution is kept the same)? Explain your choice.
$\qquad$
4. Calculate the solubility product of silver chloride, an extremely insoluble salt, from the following oxidation potentials:

$$
\begin{array}{ll}
\mathrm{Ag} \rightarrow \mathrm{Ag}^{+}+e^{-} & \boldsymbol{E}^{\mathrm{o}}=-0.7996 \mathrm{~V} \\
\mathrm{Ag}+\mathrm{Cl}^{-} \rightarrow \mathrm{AgCl}+e^{-} & \boldsymbol{E}^{\circ}=-0.2221 \mathrm{~V}
\end{array}
$$

5. Construct a standard voltaic cell diagram that will enable you to determine the solubility product of AgCl from the half reactions given in the previous question.
6. A cell that has the following half reactions was constructed.
$\mathrm{Cd}^{2+}+2 \mathrm{e}^{-} \rightarrow \mathrm{Cd}$
$\mathrm{Cd}+3 \mathrm{en} \rightarrow \mathrm{Cd}(\mathrm{en})_{3}{ }^{2+}+2 \mathrm{e}^{-}$

The measured $\boldsymbol{E}^{\mathrm{o}}$ at $25^{\circ} \mathrm{C}$ was +0.38 V . Calculate the experimental $\mathrm{K}_{\mathrm{f}}$.
$\qquad$ Section: $\qquad$

Pre-Lab Questions: Determination of an Equivalent Mass by Electrolysis

1. In an electrolysis cell similar to the one employed in this experiment, a student observed that his unknown metal anode lost 0.233 g while a total volume of 94.50 mL of $\mathrm{H}_{2}$ was being produced. The temperature in the laboratory was $25^{\circ} \mathrm{C}$, and the barometric pressure was 740 mm Hg . At $25^{\circ} \mathrm{C}$, the vapor pressure of water is 23.8 mm Hg . To find the equivalent mass of his metal, the student filled in the blanks below:
$\mathrm{P}_{\text {hydrogen gas }}=\mathrm{P}_{\text {bar }}-\mathrm{VP}_{\text {water }}=$ $\qquad$ $\mathrm{mm} \mathrm{Hg}=$ $\qquad$ atm
$\mathrm{V}_{\text {hydrogen gas }}=$ $\qquad$ $\mathrm{mL}=$ $\qquad$ L
$\mathrm{T}=$ $\qquad$ K
$n_{\text {hydrogen gas }}=$ $\qquad$ moles
$1 \mathrm{~mol} \mathrm{H}_{2}$ requires passage of $\qquad$ faradays

Faradays passed (moles of electrons) $=$ $\qquad$
Loss of mass of metal anode $=$ $\qquad$ g

Grams of metal lost per faraday passed $=$ grams lost/faradays passed $=$

The student was told that the identity of the metal anode is copper.
$\mathrm{MM} \mathrm{Cu}=$ $\qquad$ g. The charge $n$ on the Cu ion is $\qquad$ . (Eq. 3)

Name: $\qquad$ Section: $\qquad$

Data and Calculations: Determination of an Equivalent Mass by Electrolysis

Mass of metal anode $\qquad$
Mass of anode after first electrolysis $\qquad$
Mass of anode after second electrolysis $\qquad$
Initial buret reading
Buret reading after first electrolysis
Initial buret reading for the second electrolysis
Buret reading after second electrolysis

Equivalent mass of metal (GEM $=\mathrm{g}$ lost $/$ faradays passed $)$ $\qquad$ g

Unknown metal number
Metal
MM $\qquad$
Charge $n$ on cation (equation 3)
$\qquad$

Pre-Lab Questions: Determination of an Equivalent Mass by Electrolysis

1. In ordinary units, the faraday is equal to 96,485 coulombs. A coulomb is the amount of electricity passed when a current of one ampere flows for one second. Given the charge on an electron, $1.6022 \times 10^{-19}$ coulombs, calculate a value for Avogadro's number.
2. Consider the electrolysis of $\mathrm{Na}_{2} \mathrm{SO}_{4}(\mathrm{aq})$. Write the overall net ionic equation that occurs for this electrolysis. Note: Consider all the possible reactions; the oxidation of water or sulfate ions, the reduction of water or sodium ions. Determine which is more likely to occur.
$\qquad$
$\qquad$

## Data

Weight of salicylic acid added $\qquad$
Volume of acetic anhydride $\qquad$
Density of acetic anhydride $\qquad$
Molecular Weight of acetic anhydride $\qquad$
Molecular Weight of salicylic acid $\qquad$
Theoretical Yield of aspirin $\qquad$
Actual Yield of crude aspirin $\qquad$
Actual Yield of recrystallized aspirin $\qquad$
Percent Yield of recrystallized aspirin $\qquad$
Melting Point of pure aspirin (literature) $\qquad$
Melting Point of recrystallized aspirin $\qquad$

## Discussion Questions:

1. Determine the percentage yield of your crude product.
2. As in many organic reactions, the synthesis in this experiment is an equilibrium reaction. What steps could you take to improve the yield of aspirin in this particular experiment?
3. If the aspirin crystals were not completely dried before the melting point was determined, what effect would this have on the observed melting point?
$\qquad$
4. (Optional) Discuss the purity of your final product. How pure (or impure) is your aspirin based on literature values? Comment on how your IR spectrum parallels the spectrum of pure acetylsalicylic acid, making certain to LABEL and discuss all characteristic absorption peaks. You should turn in the labeled IR spectrum of your product with this report.
5. Consider the reaction shown below. Predict the product(s) of this reaction.

$\qquad$

Post-Lab Questions: Synthesis and Characterization of Aspirin

1. Determine the theoretical yield of aspirin that can be obtained from the addition of 2.0 grams of salicylic acid and 5.0 mL of acetic anhydride (density $=1.08 \mathrm{~g} / \mathrm{mL}$ ). What is the limiting reagent?
2. Determine the percentage yield of the reaction if 1.9 g of aspirin is obtained in this experiment.
3. What is the purpose of recrystallization?
4. Draw and name two different structural isomers for esters (RCOOR) with an empirical formula $\mathrm{C}_{3} \mathrm{H}_{6} \mathrm{O}_{2}$.

## Part B Liquid Unknowns

$\left.\begin{array}{|c|c|c|}\hline \text { Name of Solvent } & \text { Formula } & \text { Draw the 3D structure } \\ \hline \begin{array}{c}\text { acetone } \\ \text { or } \\ \text { 2-propanone }\end{array} & \mathrm{C}_{3} \mathrm{H}_{6} \mathrm{O} & \\ \hline \begin{array}{c}\text { ethyl acetate } \\ \text { or } \\ \text { ethyl ethanoate }\end{array} & \mathrm{C}_{4} \mathrm{H}_{8} \mathrm{O}_{2}\end{array}\right]$
$\qquad$
$\qquad$

Post-Lab Questions: Introduction to IR and NMR
Consider the following two molecules:

1. What should you see in their infrared spectra that should allow them to be distinguished?
2. Label each of the hydrogen atoms in the molecules above with the letters "a," "b," "c," etc. to indicate all of the different types of hydrogen.
3. For each of the molecules, draw what you would expect the ${ }^{1} \mathrm{H}$ NMR spectrum to look like. Label each signal with the letters that you used in question 2 ("a," "b," "c," etc.). Be sure to place the signals in the appropriate chemical shift order and to draw and label the appropriate splitting pattern:

$\qquad$
$\qquad$

## Problem Set

1. A student performs an experiment to calculate the specific heat capacity of copper. The student experimentally finds the answer $0.340 \mathrm{~J} / \mathrm{g}^{\circ} \mathrm{C}$. Looking up the accurate published value it is found to be $0.385 \mathrm{~J} / \mathrm{g}^{\circ} \mathrm{C}$. Solve for the student's percent error.

Percent error $=\left|\frac{\text { Experimental }- \text { True }}{\text { True }}\right| \times 100 \%$
2. Since 1965 , dimes are composed of copper with $25 \%$ nickel on the outside. A Roosevelt Type dime ( 1946 to 1964), designed by John R Sinnockis, is composed of $90.0 \%$ silver and $10.0 \%$ copper. The composition changed when the dime cost more in silver than it was worth. A 1963 dime is weighed on ten different balances, and the mass is recorded.

| Balance <br> Number | Mass $(\mathbf{g})=\mathbf{x}_{\mathbf{m}}$ | $\mathbf{d}=\mathbf{x}_{\mathbf{m}}-\overline{\mathbf{x}}$ | $\mathbf{d}^{\mathbf{2}}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{1}$ | 2.495 g |  |  |
| $\mathbf{2}$ | 2.509 g |  |  |
| $\mathbf{3}$ | 2.507 g |  |  |
| $\mathbf{4}$ | 2.511 g |  |  |
| $\mathbf{5}$ | 2.508 g |  |  |
| $\mathbf{6}$ | 2.538 g |  |  |
| $\mathbf{7}$ | 2.512 g |  |  |
| $\mathbf{8}$ | 2.501 g |  |  |
| $\mathbf{9}$ | 2.510 g |  |  |
| $\mathbf{1 0}$ | 2.490 g |  |  |

a) Solve for the average value, $\overline{\mathrm{x}}$ :
b) Fill in the chart for all the d and $\mathrm{d}^{2}$ values.
$\qquad$ Section: $\qquad$
c) Solve for the standard deviation, s.

$$
\mathrm{s}=\sqrt{\frac{\sum \mathrm{d}^{2}}{\mathrm{n}-1}}
$$

d) Solve for the range, $\overline{\mathrm{x}} \pm 2 s$.
e) Check all data points against the range. Identify values outside the range that may be unreliable and discarded:
f) Do you suspect the differing values are due to random errors or systematic errors or possibly both? Explain. How might you test your hypothesis?
g) Solve for the new average value, $\overline{\mathrm{x}}$, removing values outside the range in part (e).

Note: Once unreliable data points are discarded the process should be repeated to recalculate $\bar{x}, d, s$, and range values. Only the recalculation of $\bar{x}$ is required for the problem set today, but you are encouraged to recalculate $d$, s and range on your own.
$\qquad$
$\qquad$

3a) A student determines the concentration of a sodium hydroxide solution by titration with standardized KHP. S/he obtains the values: $0.190 \mathrm{M}, 0.202 \mathrm{M}$, and 0.205 M . Should the value 0.190 M be rejected? Apply the $Q$ Test. For three values Q must be greater than 0.94 to reject the number.
$\mathrm{Q}=\left|\frac{\text { suspect-nearest }}{\text { largest-smallest }}\right|$
b) The student decides to repeat the experiment two more times. The five values now include: $0.190 \mathrm{M}, 0.202 \mathrm{M}, 0.205 \mathrm{M}, 0.201 \mathrm{M}$ and 0.203 M . Use the $Q$ Test to see if the first value may be rejected. For five values Q must be greater than 0.64 to reject the number.
c) Solve for the average Molarity of the measurements from part $b$ with and without the rejected number. Is there value in repeating an experiment several times?
$\qquad$
4. (Take home assignment). A set of solution densities as a function of weight/volume $\%$ sugar is given below. Note that weight/volume \% sugar refers to how many grams of sugar per 100 mL of solution. As an example, $9.000 \%$ means that there are 9.000 g of sugar per 100 mL of solution. Use Excel ${ }^{\circledR}$ (or similar program) to construct a density ( y -axis) versus weight/volume \% sugar ( x -axis) plot. Add a linear fit through the Add Trendline function and display the equation and the $r^{2}$ value on your chart. Examine your $r^{2}$ value and your plot. You will notice, upon visual inspection, that there are four data points that can be considered outliers. Remove these data points, one set at a time by highlighting and then deleting the $\mathrm{x}, \mathrm{y}$ values on the columns. As you delete the outliers, one data set at a time, you will see that the graph, the equation and the $r^{2}$ change accordingly. Note how the $r^{2}$ value changes. By the last deletion, you will now have an $r^{2}$ value that is generally acceptable.

Print out two graphs, (1) use all data points, (2) without all four outliers, and submit to your instructor in lab next week. Graphs should conform to the five guidelines given in the introduction.

Display the equation and $r^{2}$ value.

| weight/volume \% sugar | density of solution $(\mathrm{g} / \mathrm{mL})$ |
| ---: | ---: |
| 0.00 | 0.998 |
| 2.007 | 1.017 |
| 3.070 | 1.002 |
| 4.000 | 1.009 |
| 5.010 | 1.008 |
| 6.094 | 1.036 |
| 6.991 | 1.017 |
| 8.008 | 1.020 |
| 9.000 | 1.028 |
| 10.00 | 1.030 |
| 11.12 | 1.033 |
| 12.11 | 1.053 |
| 13.01 | 1.041 |
| 15.00 | 1.050 |
| 16.00 | 1.055 |
| 17.02 | 1.055 |
| 18.00 | 1.056 |
| 19.00 | 1.060 |
| 21.03 | 1.071 |
| 23.05 | 1.066 |
| 24.02 | 1.080 |
