MATH - Mathematics

Course Number (CB01B)

M15H

Course Title (CB02)

Honors: Introductory Statistics

Banner/Short Title

Honors: Intro. Statistic

Credit Type

Credit

Start Term

Fall 2023

Catalog Course Description

Explores the nature of statistical methods, including description of sample data, probability, theoretical frequency distributions, sampling, estimation, testing hypotheses and special topics. Provides problem solving techniques. Uses technology to analyze large data sets. Honors work challenges students to be more analytical and creative through expanded assignments and enrichment opportunities.

Course Credit Limitations: Credit will not be awarded for both the honors and regular versions of a course. Credit will be awarded only for the first course completed with a grade of "C" or better or "P". Moorpark College Honors Program requires a letter grade.

Taxonomy of Programs (TOP) Code (CB03)

Prerequisites

Intermediate Algebra or Pathways to Statistics or placement as determined by the college's multiple measures assessment process.

Entrance Skills**Entrance Skills**

Intermediate Algebra

- graph and interpret linear and quadratic functions.
- analyze and solve various equations, inequalities, and systems of equations.

Entrance Skills

Pathways to Statistics:

- compute the mean and standard deviation of sample data.
- graph a scatter plot and compute the linear regression line for the data.
- graphing an exponential function.
- given two points on a line, find the point slope and slope intercepts forms of the graph.
- calculate the z-score giving a mean and standard deviation and then find a probability.

Requisite Justification**Requisite Type**

Prerequisite

Requisite

Intermediate Algebra

Requisite Description

Course in a sequence

Student Learning Outcomes (CSLOs)**Upon satisfactory completion of the course, students will be able to:**

- | | |
|---|---|
| 1 | construct a single-sample confidence interval, and draw an appropriate conclusion. This can be done by hand, with a graphing calculator, or with statistical software. |
| 2 | construct a single-sample hypothesis test based on a given claim, and draw an appropriate conclusion. This can be done by hand, with a graphing calculator, or with statistical software. |

Course Objectives**Upon satisfactory completion of the course, students will be able to:**

- | | |
|---|---|
| 1 | summarize data graphically by displaying data using methods from descriptive statistics, interpreting data in tables graphically by using histograms, frequency distributions, box-and whisker plots (five-number summary); find measures of central tendency for data sets: mean, median, and mode; find measures of variation for data sets: standard deviation, variance, and range; determine relative positions of data and distinguish among scales of measurements and their implications; distinguish between populations and samples; and identify the standard method of obtaining data and the advantages and disadvantages of each. |
| 2 | find simple probabilities and probabilities of compound events and compute probabilities using the complement, discrete probability distributions; apply concepts of sample space, and the binomial probability distribution. Honors: And the Poisson distribution. |
| 3 | standardize a normally distributed random variable; use normal distribution tables to find probabilities for normally distributed random variables and the t-distribution; use the Central Limit Theorem to find probabilities for sampling distributions. |
| 4 | construct and interpret confidence intervals for proportions and means. |
| 5 | identify the basics of hypothesis testing and perform hypothesis testing for means, proportions and standard deviations from one population, and difference of means and proportions from two populations, including finding and interpreting p-value and examining Type I and Type II error. |
| 6 | find linear least-squares regression equations for appropriate data sets; graph least-square regression equations on the scatter plot for the data sets; find and apply the coefficient of correlation. |
| 7 | use the chi-square distribution to test independence and to test goodness of fit. |
| 8 | conduct a one-way Analysis of Variance (ANOVA) hypothesis test. |
| 9 | select an appropriate hypothesis test and interpret the result using p-value; use appropriate statistical technique to analyze and interpret applications based on data related to business, social sciences, psychology, life sciences, health sciences or education, and interpret results using technology-based statistical analysis. |

10	Honors: find probabilities using Poisson distributions.
11	Honors: estimate binomial probabilities.
12	Honors: find and use standard deviations.

Course Content

Lecture/Course Content

4% A. Descriptive Statistics and Summarizing Data Graphically

1. Histograms
2. Frequency distributions
3. Measures of central tendency
4. Measures of variation
5. Relative positions and scales of measurements
6. Box-and-Whisker plot (optional*)

10% B. Probability and the Binomial Distribution

1. Definition of probability and sample space
2. Probability of independent events, mutually exclusive events
3. Complement rule and conditional probability
4. Random variables and expected value
5. Binomial probability distribution
6. Poisson probability distribution (optional*)

15% C. Normal Distribution

1. Normal distributions
2. Standard normal distribution
3. Using the standard normal distribution table
4. Probabilities of normally-distributed random variables
5. Sampling distributions and the Central Limit Theorem
6. Applying Central Limit Theorem to find probabilities of sampling distributions

20% D. Confidence Intervals

1. Confidence levels
2. Using standard normal distribution to find confidence interval estimate of the mean when population standard deviation is known
3. Using student's t distribution to find confidence interval estimate for population mean when population standard deviation is unknown
4. Confidence intervals for proportions

25% E. Hypothesis Testing

1. Method of hypothesis testing
2. Using normal distribution to perform hypothesis testing when population standard deviation is known
3. Using t-distribution to perform hypothesis testing when population standard deviation is unknown
4. Hypothesis testing for proportions
5. Hypothesis testing for difference of two means with standard deviations known and unknown using t-distribution
6. Hypothesis test for difference of two proportions
7. Applications of hypothesis testing using data from areas such as business, social sciences, psychology, life sciences, health sciences or education
8. Performing hypothesis testing using technology such as Statistical Package for the Social Sciences (SPSS), EXCEL, minitab or graphics calculators
9. F-test for difference of standard deviations (optional*)

15% F. Linear Correlation

1. Scatterplots and fitting lines to data
2. Least-squares regression lines
3. Graphing least-squares line on scatterplot for data
4. Coefficients of correlation
5. Applications of correlation and regression analysis from areas such as business, social sciences, psychology, life sciences, health sciences, or education

8% G. Chi-Square Distribution

1. Testing for independence using chi-square
2. Testing for goodness of fit using chi-square

3% H. Analysis of Variance (ANOVA)

1. Overview of analysis of variance and the F distribution
2. One-way ANOVA hypothesis tests

*Optional topics should be covered if time allows, but may be omitted without loss of continuity in the mathematics program

Laboratory or Activity Content

n/a

Methods of Evaluation

Which of these methods will students use to demonstrate proficiency in the subject matter of this course? (Check all that apply):

Written expression
 Problem solving exercises
 Skills demonstrations

Methods of Evaluation may include, but are not limited to, the following typical classroom assessment techniques/required assignments (check as many as are deemed appropriate):

Computational homework
 Individual projects
 Objective exams
 Problem-solving exams
 Problem-solving homework
 Quizzes
 Other (specify)
 Classroom Discussion
 Projects

Other

Problems must require students to demonstrate analytic skills and the step-by-step details required for the solution.

Instructional Methodology

Specify the methods of instruction that may be employed in this course

Class activities
 Class discussions
 Collaborative group work
 Computer-aided presentations
 Demonstrations
 Distance Education
 Group discussions
 Instructor-guided interpretation and analysis
 Instructor-guided use of technology
 Lecture
 Problem-solving examples
 Other (specify)

Specify other method of instruction

All instructors will use best practices to provide an inclusive learning environment that respects all forms of racial, ethnic, age, and gender diversity, and provides for the individual needs of students of all learning styles.

Describe specific examples of the methods the instructor will use:

1. Use of whiteboard or document camera to draw diagrams or pictures to illustrate computations of probabilities from standard distributions.
2. Classroom discussion, with student response, such as discussing whether to reject, or not reject a claim about a parameter with sufficient justification.
3. Data collection activities, done either in class or outside of class, whereby students collect data and illustrate their distributions in charts or graphs.

Representative Course Assignments**Writing Assignments**

1. Homework problems selected from the statistics textbook where answers require a written explanation of the solution, such as interpreting a confidence interval.
2. Short answer problems on exams, such as stating conclusions to hypothesis tests

3. Graded assignments: in-class and/or homework assignments requiring complete solutions using both written English and symbolic mathematical language.
4. Honors: Short problems on exams including conclusions to test for standard deviations.

Critical Thinking Assignments

1. Describing and applying algorithmic steps for obtaining the solution to a mathematical problem, such as describing the steps and conducting a hypothesis test and stating the conclusion.
2. Comparing and contrasting methods of solution to mathematical problems, such as comparing hypothesis testing with generating confidence intervals.
3. Honors: Using the normal distribution to estimate binomial probabilities.

Reading Assignments

1. Reading from textbook descriptions of different types of sampling and the advantages and disadvantages of each.
2. Viewing diagrams in textbook illustrating different types of distributions of data such as centrally distributed data, skewed data, or data that is bimodal or trimodal.
3. Reading from textbook definitions of different types of standard distributions such as the Normal Distribution and the t-Distribution and aspects of their behaviors and properties.
4. Honors: Reading news articles to find examples of statistical reasoning versus causal reasoning.

Skills Demonstrations

1. Using calculator or computer to determine cut-off values using the reverse Normal Distribution.
2. Computing confidence intervals for pre-determined confidence levels and using them to determine whether to reject a claim about a parameter.
3. Honors: Using Poisson distributions to find probabilities.

Problem-Solving and Other Assignments (if applicable)

1. Computing basic probabilities to a specified number of decimal places using various rules of probability such as the Addition Rule, Multiplication Rule and Complement Rule.
2. Applying analytic techniques for solving mathematical and application problems, such as finding probabilities of events.
3. Honors: Performing standard deviation calculations.

Outside Assignments

Representative Outside Assignments

1. Developing and completing projects performing probability experiments, such as using a deck of cards, dice, or coins.
2. Finding statistical examples in the media and interpreting the results.
3. Gathering real life data and analyzing the data set by finding the mean, median, mode, standard deviation, and variance.
4. Honors: Developing and completing projects that use the Poisson Distribution for the occurrence of events over some specified interval like the number of earthquakes in a year.

Using the Library's print and online resources, locate articles discussing the use of statistics and mathematical formulas in current events, such as elections, national census, and other population trends.

Sufficient Library Resources exist

Yes

Example of Assignments Requiring Library Resources

Reading current magazines or periodicals, or encyclopedia resources to collect data for analysis in creating confidence intervals or testing claims about a hypothesis in areas such as science, economics, societal studies, politics or current issues.

Honors: Developing and completing projects that use the Poisson Distribution for the occurrence of events over some specified interval like the number of earthquakes in a year.

Distance Education Addendum**Definitions****Distance Education Modalities**

Hybrid (1%–50% online)

Hybrid (51%–99% online)

100% online

Faculty Certifications

Faculty assigned to teach Hybrid or Fully Online sections of this course will receive training in how to satisfy the Federal and state regulations governing regular effective/substantive contact for distance education. The training will include common elements in the district-supported learning management system (LMS), online teaching methods, regular effective/substantive contact, and best practices.

Yes

Faculty assigned to teach Hybrid or Fully Online sections of this course will meet with the EAC Alternate Media Specialist to ensure that the course content meets the required Federal and state accessibility standards for access by students with disabilities.

Common areas for discussion include accessibility of PDF files, images, captioning of videos, Power Point presentations, math and scientific notation, and ensuring the use of style mark-up in Word documents.

Yes

Regular Effective/Substantive Contact**Hybrid (1%–50% online) Modality:**

Method of Instruction	Document typical activities or assignments for each method of instruction
Asynchronous Dialog (e.g., discussion board)	Use of student discussion boards to discuss concepts from the material, solutions to homework problems, general discussion of techniques in solving problems, study skills, or arranging study groups.
E-mail	Responding to student queries about material, grade information, course policies and procedures, scheduling and due dates, submitting homework assignments, or making general announcements to the class.
Face to Face (by student request; cannot be required)	Students requesting to speak to instructor in person for personal help on material, grade information, or discussion of policies and procedures.
Other DE (e.g., recorded lectures)	Posting of recorded lectures either by the instructor, recorded lessons available through campus resources, or use of public online resources available on the internet.
Synchronous Dialog (e.g., online chat)	Active live discussion with the instructor on material concepts, techniques for problem solving, feedback on solutions to problems, general chat on study skills, or answers to homework problems, quizzes or tests.

Hybrid (51%–99% online) Modality:
